Lester Snow

(Executive Director, CALFED)

1416 Ninth St.

Sacramento, CA 95814

Dear Mr. Snow,

I've become aware of CALFED's proposals for increased water storage in the Central Valley, by increasing height of existing dams or building new ones.

The impact on species through destruction of habitat or damming of rivers is very concerning. Significant disruptions to river flow will cause great difficulty for the marine there, greater water efficiency in agriculture & domestic use is greatly to be preferred over simply supplying water to cover our wasteful practices.

Regards

Daniel, 620 Central Ave, Menlo Park, CA
